

HOW EFFICIENT ARE YOU WITH YOUR SUPPLEMENTARY FEED?

HOW IT WORKS

RECYCLED GREEN WATER
can be pumped into the Flood Wash Tank and used to wash down the Feed Pad.

WATER CONSERVATION
By also installing an Archway Weeping Wall green water can flow a full circle. From Pond to Feed Pad to Weeping Wall and back to Pond conserving a considerable volume of water.

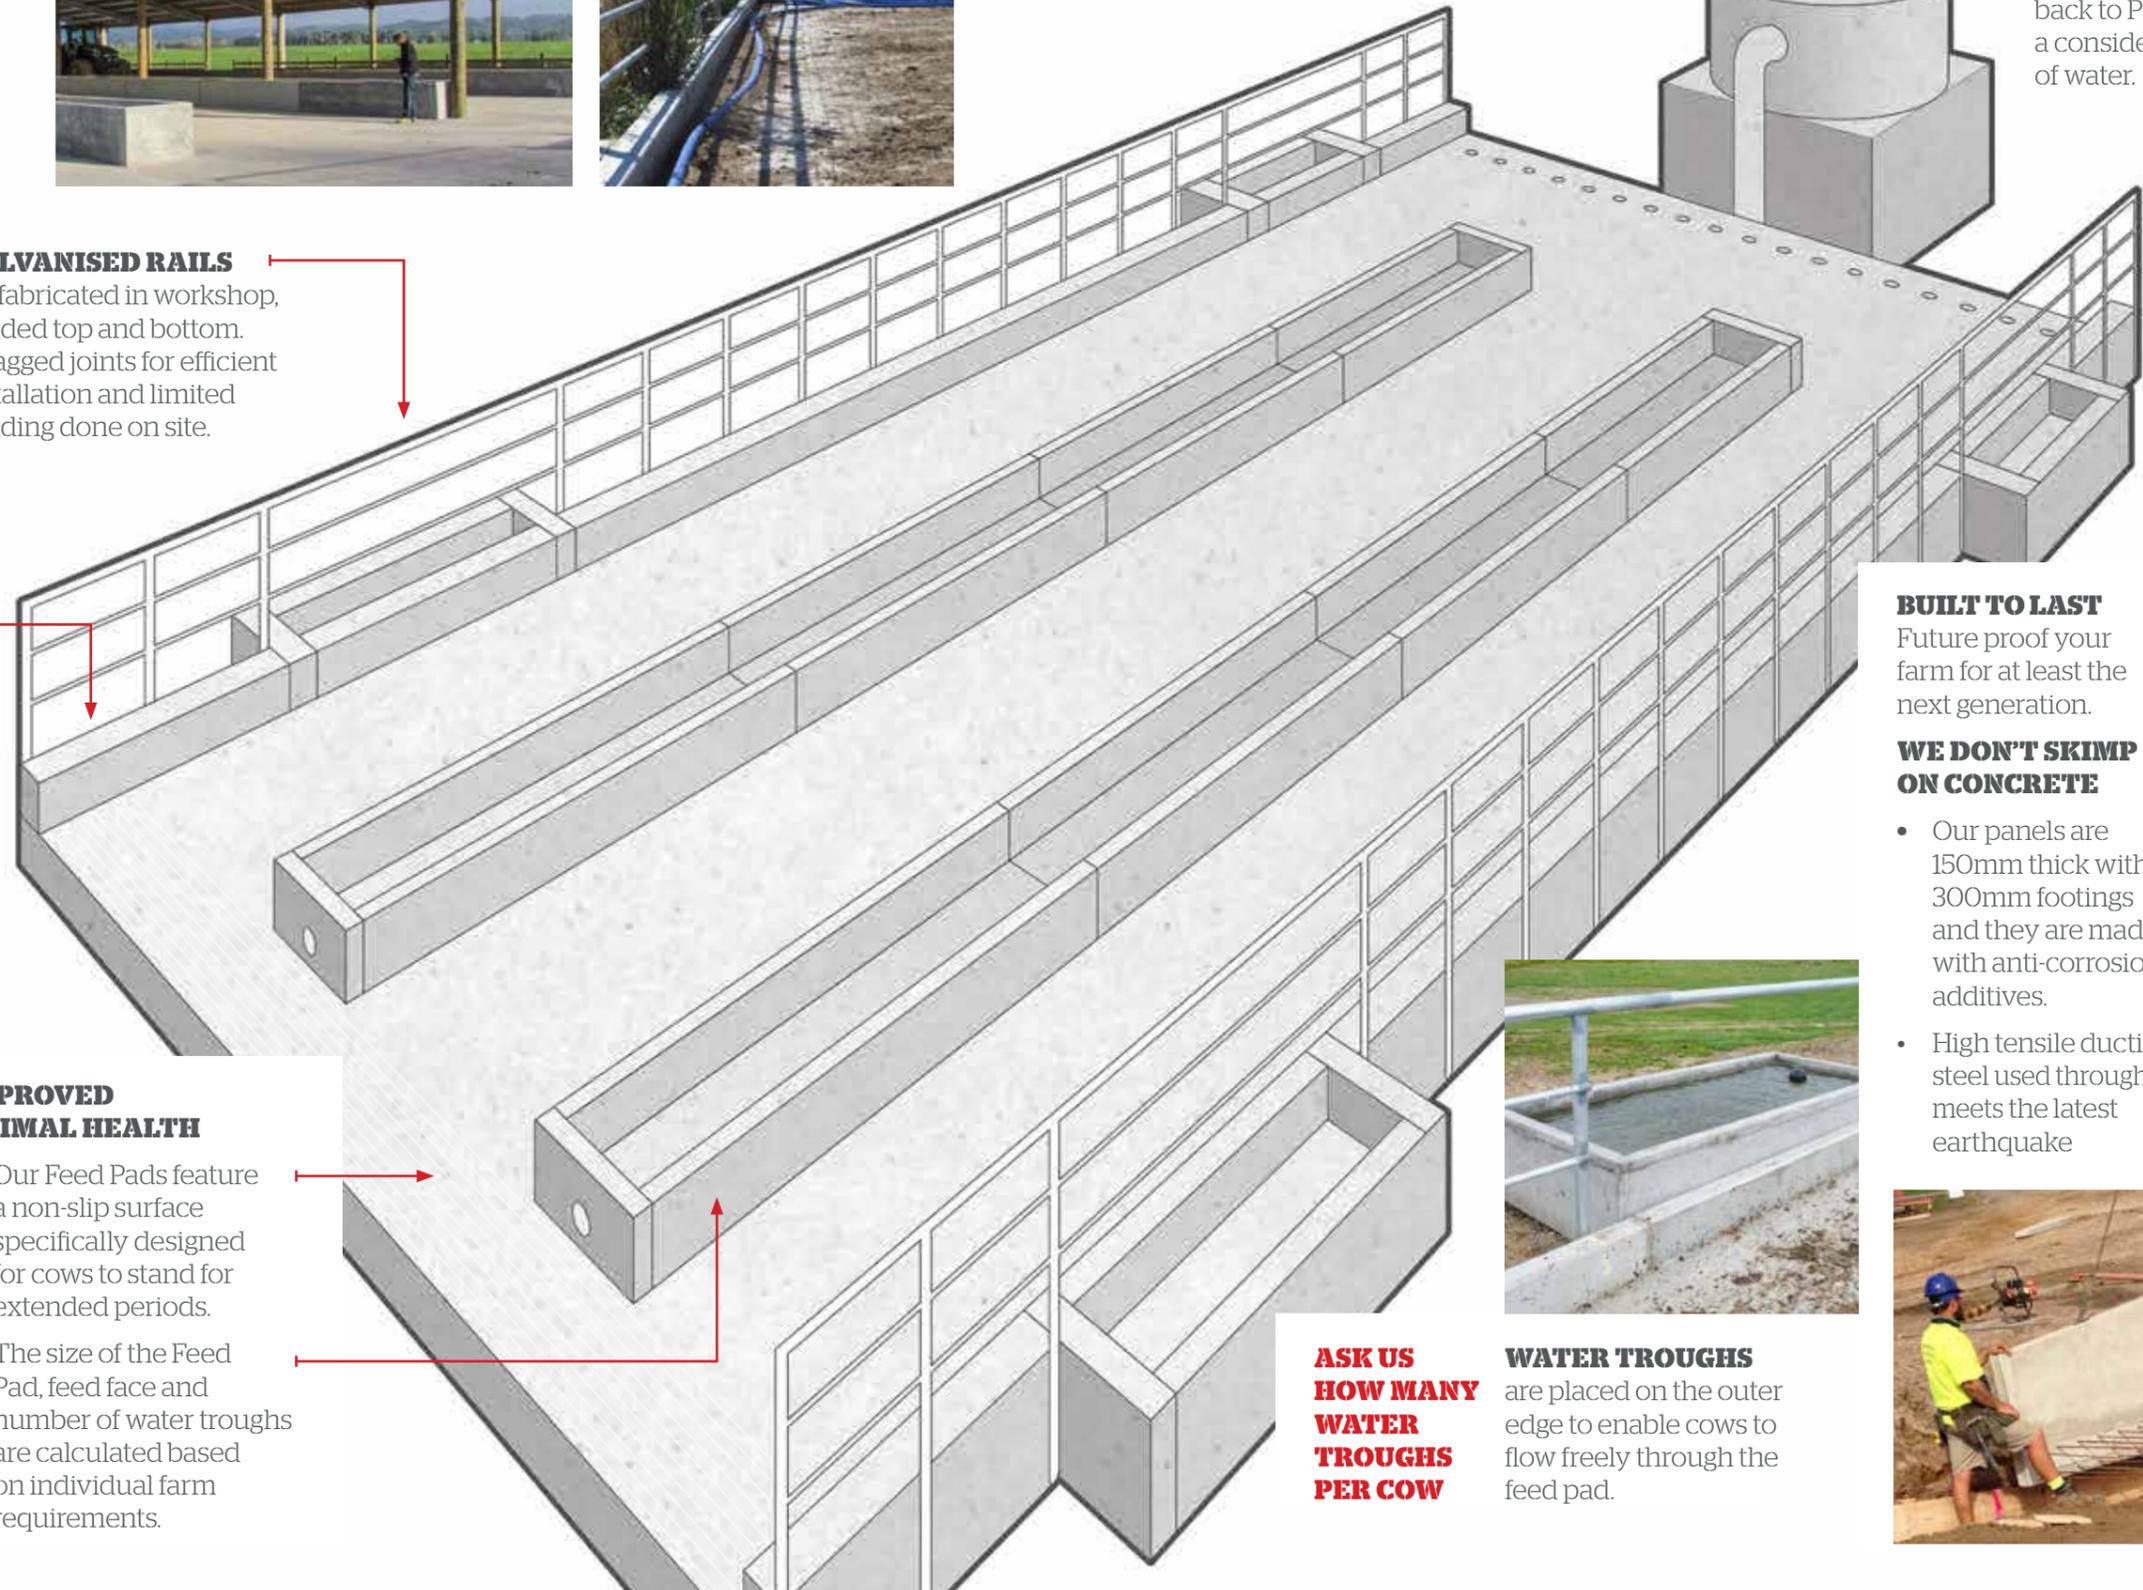

GALVANISED RAILS
Prefabricated in workshop, welded top and bottom. Swagged joints for efficient installation and limited welding done on site.

PRECAST NIB WALLS
are 260mm high ensuring maximum containment.

IMPROVED ANIMAL HEALTH

- Our Feed Pads feature a non-slip surface specifically designed for cows to stand for extended periods.
- The size of the Feed Pad, feed face and number of water troughs are calculated based on individual farm requirements.

ASK US HOW MANY WATER TROUGHS PER COW

WATER TROUGHS are placed on the outer edge to enable cows to flow freely through the feed pad.

FREE NUTRIENT TESTING

Six months after installation we provide free nutrient testing through Hill Laboratories.

BUILT TO LAST
Future proof your farm for at least the next generation.

WE DON'T SKIMP ON CONCRETE

- Our panels are 150mm thick with 300mm footings and they are made with anti-corrosion additives.
- High tensile ductile steel used throughout meets the latest earthquake

50 YEAR CONCRETE GUARANTEE

20 YEAR SEALANT GUARANTEE

- Maximises feed efficiency
- Doubles as a standoff pad
- Improves Animal Health

WHAT DO OUR CUSTOMERS THINK?

The reason I chose Archway was because I met Matt on site to discuss our project and he had a large amount of experience in the types of projects that we were undertaking.

Last year we received a letter from our dairy company saying we weren't compliant with our effluent. As a result of the system that the Archway Group has installed we're now 100% compliant.

One of the benefits we've discovered from using an Archway Feed Pad is that we've been able to obtain 25% more efficient utilisation of our feed.

The installation went extremely smoothly, the team were here from 2am to 2pm. The whole job was finished without a hitch.

Matt from Archway was able to bring us an infrastructure plan that had solutions to many of the problems we hadn't even yet thought of.
