HOW IT WORKS

THE CLEVER ENGINEERED MODULAR DESIGN and the precasting of all the panels in our yard means installation is very quick with minimal on-farm disruption.

All components are designed to be easily moved into place using a 12 tonne digger.

A 60m x 12m bunker can be **INSTALLED IN ONLY 4 DAYS!**

***REDUCE WASTE BY UP TO 50%** Save up to 25% compared to traditional silage paddock stacks. Save up to a further 25% by also installing an Archway Feed Pad.

ANY SIZE YOU WANT The modular design makes it easy to build to your farms specific requirements. To work out what size you need work off 4m³ per tonne of dry matter and match your rate of feed-out to the width of the feed face.

WALL HEIGHT can be made anywhere between 1.5m and 3m high.

FREE NUTRIENT TESTING

Six months after installation we provide free nutrient testing through Hill Laboratories.

SPLAYED WALLS create superior compaction, retaining more dry matter and energy in your silage and reducing the potential for mould or spoiled silage.

OPTIMISED FEED FACE The width of the feed face is designed specifically for individual farm requirements based on daily use.

COLLECTION POINT Captures nutrients and recycles them back through the system.

100% SEALED joints are achieved using a fit for purpose system including primer and chemical resistant silicone.

HYDROPHILIC SILICONE expands when wet, completely sealing the panels to the base.

BRACING PANELS Provide excellent strength and a ready-made support structure making additional bunkers very cost effective if required.

BUILT TO LAST Future proof your farm for at least the next generation.

WE DON'T SKIMP ON CONCRETE

- Our panels are 150mm thick with 300mm footings and they are made with anti-corrosion additives.
- High tensile ductile steel used throughout meets the latest earthquake standards.

50 YEAR CONCRETE GUARANTEE

20 YEAR SEALANT GUARANTEE

- A Tri Block Storage Bunker is perfect for all kinds of bulk storage and compacted feed.
- Maize and Grass Silage
 - Other Stock Feed
 - Fertiliser

Reduce supplementary feed waste by up to 50%*

WHAT DO OUR CUSTOMERS THINK?

I heard about Archway Group through friends and neighbours, jobs that they'd had done and it seemed like a logical choice.

We installed a Tri-Block system because we grow a lot of maize supplement and we wanted to reduce wastage.

We've taken a long term view with the farm, Archway Group are going to be part of that.

There are cost benefits with the modular design. If we choose to add an additional bunker we can utilise the existing structure and it's been engineered to stand the test of time.

I'd have no hesitation recommending Archway Group to others. They've got good product, a great team and very efficient.
