HOW IT WORKS

Designed and sized to accommodate the rate of feed and amount of storage required. Suitable for all dry storage needs including: feed, fertiliser, other dry store materials and even machinery if required.

- Reduces damage caused by vermin and other pests.
- Reduces wastage of expensive supplementary feeds.
- Complies with Civil Aviation Authority fertiliser storage requirements.
- Do you know you can't store feed against treated timber (MPI).

ROOF OPTIONS:

- Colour steel to match existing infrastructure.
- Manual or automated options.
- Windproof and durable to conditions - track top and bottom of wheels.
- Track mounted on the outside of the wall and shaped so no product spillage can inhibit sliding.
- *Precast panels delivered to site. Installation - one day for bunker, one day for roof
